

Participation Activity 4

Last Name: _____

First Name: _____

Std #: _____

Consider the function declaration below:

```
short someFunc( int grades[], unsigned int size, long sum, int avg );
```

Write the expected *parameter-to-register* mapping, once this function is converted to x86-64 assembly instructions on our *target machine*:

`grades[] -> %rdi, size -> %esi, sum -> %rdx, avg -> %ecx`

Also list the register in which the caller of this function will find the result:

`%ax`
