

CMPT 295

Unit - Data Representation

Lab 3 – Impact of Fixed Size Memory on results of
Arithmetic Operations in C

Lab 3 - Objective

- In this lab, we shall ...
 1. Investigate the impact of fixed size memory when performing the arithmetic operation **addition** in **C**

Lab 3 - Instructions

1. Once you have logged onto our **target machine** (either in person or remotely), make **sfuhome/CMPT295** your working directory
2. Then create a subdirectory called **Lab3**
3. Download **Lab_3.c** from our course website and save it in this subdirectory **Lab3**
4. Open **Lab_3.c** in your favourite code editor, read and understand its content – you will discover that the program is incomplete
5. Your task, in this lab, is to complete the four functions in **Lab_3.c**
6. Once you have done so, execute in **Lab_3.c** and make sure its results are correct!

Lab 3 – Instructions (cont'd)

- Remember:
 - There is nothing to submit in this lab
 - This lab is worth 0 marks
- If you have questions or are wondering about this lab's solution?
 - Attend our lab periods on Monday (starting May 26)
 - Come to the instructor's office hours (starting Week 2) and/or the TAs' office hours (starting Week 3)
