

Participation Activity 11

Last Name: _____

First Name: _____

Std #: _____

```
total = 0;
for (i = 0; i < n; i++)
    total += B[i];
return total;
```

SOLUTION

The statements below correctly describe the code above.

- Which statements are examples of **spatial locality** and which ones are examples of **temporal locality**? Tick the appropriate box!

spatial locality **temporal locality**

Statements about access data

- The code above accesses array elements in succession, i.e., in a stride-1 access pattern.
- The code above accesses the variable `total` at each iteration.

☒☐☐☒

Statements about access instructions

- The instructions (making up the code above) are accessed in sequence.
- The loop, in the code above, is cycled through repeatedly.
